

FISP 2016 will count on the company Dräger's presence, a reference in security and medical technology market

The partnership between Dräger and **FISP | International Protection and Security**

Fair exists from the first editions. This year, the fair reaches its 21st edition, which will be held from **October 05 to 07, 2016, at São Paulo Expo, in São Paulo.** "To

Dräger, FISP is Brazil's most important event in our calendar. To us, taking part in the event is the chance to be close to our customers and partners, in addition to have the opportunity to show trends and news to the sector. Narrowing the relationship and listening to our customers directly about their needs and understand the daily challenges faced by them is essential and strategic to our company in Brazil and nothing better than a great, reputable and traditional event as FISP to do that" says Adriano Morelli, sector manager at Dräger Brasil.

Headquartered in Lüdbeck, Dräger is currently an international leader in the security and medical technology fields. The product portfolio of the Hospital division covers anesthesia workstations, mechanical ventilators, lightheads, stands, monitoring equipment, IT solutions and accessories and consumables. The Security division, on its turn, offers fixed and mobile gas detection systems, respiratory protection, fire fighting equipment and alcohol and drug detectors.

To FISP 2016, will present the line **Gas Secure - wireless gas detector**, which offers the first actual wireless gas detector, recommended to industrial applications. The measurements are carried out through optical filters, infrared (IR) detector with the use of MEMS (Micro Electro Mechanical System)

technology. With low energy consumption, Gas Secure is used to detect the presence of hydrocarbon gases and warn operations on the risk of fire or explosion. The company will also present **PSS 7000**

NFPA version (National Fire Protection Agency), standalone equipment for respiratory protection. The new generation of standalone equipment, designed for professional firefighters, combines robust design, cutting-edge ergonomic aspects, wide range of settings and options to meet individual needs. The PSS 7000 is a standalone mask with built-in hoses on the holder and reflective bands in the harnesses, with harness and belt upholstered in special polymer. The design, building and materials were selected to resist to the repetitive, hard work and severe environmental conditions faced by professional firefighters, at the same time it

keeps the maximum comfort and easiness of use.

The modern, upholstered internal coating, shaped by compression, combined with high-temperature performance, offers excellent use characteristics. Friction buckles, stainless steel adjustment for hard work and adjustable straps of the aramid bands support intense use, while, at the same time, ensure placement and removal of the rear holder in a fast and easy way. The rear back holder, made up by carbon fiber, offers high resistance with low weight and excellent chemical resistance. All main components of Dräger PSS 7000 were designed for a fast and simple assembly and disassembly, in order to enable easy repair and maintenance. The new suspension of the quick-release band enables removal and replacement of the harness sets to the shoulder and the belt in a quick and easy way. The pneumatic set of all electronic components presents quick-fitting connection for quick fixation and removal. All these resources combine to ensure short return times. The connection system by quick hitch enables the cylinders to be mounted in an easy and quick way on the respiratory protection equipment, the Bodyguard 7000 pressure gauge ensures more safety and comfort to the user.

"FISP is able to gather a select audience, committed to the sector, making the relevance to the sector be more and more strategic. The event provides technical discussions, as well as companies from all over the world, which makes Brazil be

among the world's top 5 in labor safety, and part of this achievement, promoting discussions, standards that save lives and companies committed to a Brazilian worker's like, takes place because there is a significant event in Brazil like FISP", completes Morelli.

FISP is promoted by **Cipa Fiera Milano**, held by the Brazilian Association of Distributors and Importers of Labor Protection and Security Products and Equipment (**ABRASEG**), Brazilian Association of the Labor Protection and Security Material Industry (**ANIMASEG**) and the Trade Union of the Security Material Industry (**SINDISEG**) The event gathers **700 exhibitors**, in an area with **42,000 m²**, expecting to attract **50,000 field professionals**.
